ELSEVIER

Applied Mathematical Modelling 22 (1998) 1085–1097

APPLIED MATHEMATICAL MODELLING

Subject Index to Volume 22

1-dimensional unsteady flow

A variational theory for one-dimensional unsteady compressible flow – an image plane approach, J.-H. He 22 (1998) 395

Acoustics

An indirect boundary element formulation for multi-valued impedance simulation in structural acoustics, S.T. Raveendra, N. Vlahopoulos and A. Glaves 22 (1998) 379

Advection

A coastal ocean model intercomparison study for a three-dimensional idealised test case, B. Tartinville, E. Deleersnijder, P. Lazure, R. Proctor, K.G. Ruddick and R.E. Uittenbogaard 22 (1998) 165

Age distribution

Modeling dust-borne odor dynamics in swine housing based on age and size distributions of airborne dust, C.-M. Liao and S. Singh 22 (1998) 671

Airborne dust

Modeling dust-borne odor dynamics in swine housing based on age and size distributions of airborne dust, C.-M. Liao and S. Singh 22 (1998) 671

Airy's equation

A mathematical model and analytical solution for buckling of inclined beam-columns, J.H.B. Sampaio Jr., J.R. Hundhausen 22 (1998) 405

Annular jets

Annular liquid jets and other axisymmetric free-surface flows at high Reynolds numbers, J.I. Ramos 22 (1998) 423

Assembly language

Transient and steady-state performance modeling of parallel processors, M.H. Mickle 22 (1998) 533

Automobile

Modelling and analysis of variable geometry exhaust gas systems, H. Bartlett and R. Whalley 22 (1998) 545

Baroclinic instability

A coastal ocean model intercomparison study for a three-dimensional idealised test case, B. Tartinville, E. Deleersnijder, P. Lazure, R. Proctor, K.G. Ruddick and R.E. Uittenbogaard 22 (1998) 165

BEM

Boundary element method analysis for the transient conduction – convection in 2-D with spatially variable convective velocity, S.J. DeSilva, C.L. Chan, A. Chandra and J. Lim 22 (1998) 81

Bimetallic slab

MHD analysis in hydromagnetic casting process of clad steel slabs, H. Harada, E. Takeuchi, M. Zeze and H. Tanaka 22 (1998) 873

Boundary element

A fast boundary element algorithm for time-dependant potential problems, M. Zerroukat 22 (1998) 183

Boundary element method

An indirect boundary element formulation for multi-valued impedance simulation in structural acoustics, S.T. Raveendra, N. Vlahopoulos, A. Glaves 22 (1998) 379

0307-904X/98/$ – see front matter 1998 Elsevier Science Inc. All rights reserved.
PII: S0307-904X(98)10079-3

Bubble plume

On the modelling of bubble plumes in a liquid pool, B.L. Smith 22 (1998) 773

Bubbly flow

Numerical simulation of cavitating flow using the upstream finite element method, T. Uchiyama 22 (1998) 235

Buckling

A mathematical model and analytical solution for buckling of inclined beam-columns, J.H.B. Sampaio Jr. and J.R. Hundhausen 22 (1998) 405

Burner

Computation of turbulent reactive flows in industrial burners, J. Ha and Z. Zhu 22 (1998) 1059

Cache memory

Transient and steady-state performance modeling of parallel processors, M.H. Mickle 22 (1998) 533

Cavitation

Numerical simulation of cavitating flow using the upstream finite element method, T. Uchiyama 22 (1998) 235

Centroid

How well do discrete element granular flow models capture the essentials of mixing processes?, P.W. Cleary, G. Metcalfe and K. Liffman 22 (1998) 995

CFD

CFD simulation of gas dispersion dynamics in liquid cross-flows, G.D. Rigby and G.M. Evans 22 (1998) 799

CFD-model

Modelling gas injection of a Pierce–Smith-converter, J. Vaarno, J. Pitkälä, T. Ahokainen and A. Jokilaakso 22 (1998) 907

CFD modelling

CFD modelling of waste heat recovery boiler, M. Manickam, M.P. Schwarz and J. Perry 22 (1998) 823

A numerical model for predicting bubble formation in a 3D fluidized bed, P.J. Witt, J.H. Perry and M.P. Schwarz 22 (1998) 1071

Particle transport in a bottom-feed separation vessel, Y. Li, M. Rudmann and G. Brown 22 (1998) 1023

Chaos

Chaotic mixing simulations, B.T. Tan, P. Morris, M.C. Thompson and K. Hourigan 22 (1998) 1047

Char combustion

CFD modelling of waste heat recovery boiler, M. Manickam, M.P. Schwarz and J. Perry 22 (1998) 823

Chemistry

Computation of turbulent reactive flows in industrial burners, J. Ha and Z. Zhu 22 (1998) 1059

Collocation

A fast boundary element algorithm for time-dependant potential problems, M. Zerroukat 22 (1998) 183

Combustion modelling

Laminar flamelet modelling of turbulent premixed combustion, A.C. Benim, K.J. Syed 22 (1998) 113

Complex terrain

Numerical simulation of pollutant dispersion and photochemical kinetics over complex terrain, A. Giambanis, J. Anagnostopoulos, G. Bergeles 22 (1998) 313

Composite approach

Semi-analytical finite element analysis of a strip footing on an elastic reinforced soil, K. Chandrashekhara, S.J. Antony and D. Mondal 22 (1998) 331

Compound jets

Annular liquid jets and other axisymmetric free-surface flows at high Reynolds numbers, J.I. Ramos 22 (1998) 423

Computational fluid dynamics

Numerical simulation of cavitating flow using the upstream finite element method, T. Uchiyama 22 (1998) 235

CFD simulation of deflagration–detonation processes using vector- and parallel computing systems, W. Rehm, M. Gerndt, W. Jahn, F. Semler and I. Jones 22 (1998) 811
Computational simulation of fluid and dilute particulate flows on spiral con-centrators, B.W. Matthews, C.A.J. Fletcher and A.C. Partridge 22 (1998) 965

Conduction

Modelling confined multi-material heat and mass flows using SPH, P.W. Cleary 22 (1998) 981

Confined jets

Comparison of two-way coupling models for confined turbulent gas–particle jets in flash smelting, M.R. Davidson 22 (1998) 39

Conservative simulation

Conservative motion of discrete, tetrahedral tops and gyroscopes, D. Greenspan 22 (1998) 57

Continuous casting

Computed oscillations of a confined submerged liquid jet, B.M. Gebert, M.R. Davidson and M.J. Rudman 22 (1998) 843
MHD analysis in hydromagnetic casting process of clad steel slabs, H. Harada, E. Takeuchi, M. Zeze and H. Tanaka 22 (1998) 873
Mathematical and physical modeling of systems for metal delivery in the continuous casting of steel and DC casting of aluminum, D. Xu, W.K. Jones Jr., J.W. Evans and D.P. Cook 22 (1998) 883

Convection

Boundary element method analysis for the transient conduction – convection in 2-D with spatially variable convective velocity, S.J. DeSilva, C.L. Chan, A. Chandra and J. Lim 22 (1998) 81

Convective fin

The non-Fourier effect on the fin performance under periodic thermal conditions, J.-Y. Lin 22 (1998) 629

Convective–radiative fins

Application of Taylor transformation to optimize rectangular fins with variable thermal parameters, L.-T. Yu, C.-K. Chen 22 (1998) 11

CPU-time

A fast boundary element algorithm for time-dependant potential problems, M. Zerroukat 22 (1998) 183

Cylindrical films

Annular liquid jets and other axisymmetric free-surface flows at high Reynolds numbers, J.I. Ramos 22 (1998) 423

DC magnetic field

MHD analysis in hydromagnetic casting process of clad steel slabs, H. Harada, E. Takeuchi, M. Zeze and Hiroyuki Tanaka 22 (1998) 873

Deflagration–detonation process

CFD simulation of deflagration–detonation processes using vector- and parallel computing systems, W. Rehm, M. Gerndt, W. Jahn, F. Semler and I. Jones 22 (1998) 811

Direct smelting

Mathematical modelling tools for the optimisation of direct smelting processes, M. Davis, K. Pericleous, M. Cross and P. Schwarz 22 (1998) 921

Differential transform

Analysis of general elastically end restrained non-uniform beams using differential transform, S.H. Ho and C.K. Chen 22 (1998) 219

Diffusion

Enhanced lumped-differential formulations of diffusion problems, E.J. Corrêa and R.M. Cotta 22 (1998) 137
Modeling dust-borne odor dynamics in swine housing based on age and size distributions of airborne dust, C.-M. Liao and S. Singh 22 (1998) 671

Discontinuous coefficients

High-order-accurate discretization of a second-order equation with discontinuous coefficients, M. Arad, G. Ben-Dor, A. Yakhot 22 (1998) 69

Discrete approach

Semi-analytical finite element analysis of a strip footing on an elastic reinforced soil,

K. Chandrashekhara, S.J. Antony and D. Mondal 22 (1998) 331

Discrete element

How well do discrete element granular flow models capture the essentials of mixing processes?, P.W. Cleary, G. Metcalfe and K. Liffman 22 (1998) 995

Distributed

Modelling and analysis of variable geometry exhaust gas systems, H. Bartlett, R. Whalley 22 (1998) 545

Drift-flux model

Particle transport in a bottom-feed separation vessel, Y. Li, M. Rudman and G. Brown 22 (1998) 1023

Driven cavity

Chaotic mixing simulations, B.T. Tan, P. Morris, M.C. Thompson and K. Hourigan 22 (1998) 1047

Dust-borne odor

Modeling dust-borne odor dynamics in swine housing based on age and size distributions of airborne dust, C.-M. Liao and S. Singh 22 (1998) 671

Dynamic control systems

Unsteady state fugacity model by a dynamic control system, R. Bru, J.M. Carrasco, L.C. Paraíba 22 (1998) 485

Dynamic response

Analysis of general elastically end restrained non-uniform beams using differential transform, S.H. Ho and C.K. Chen 22 (1998) 219

Eddy break-up modelling

CFD modelling of waste heat recovery boiler, M. Manickam, M.P. Schwarz, J. Perry 22 (1998) 823

Eigenfunction expansions

Stokes flow in closed, recetangular domains, P.H. Gaskell, M.D. Savage, J.L. Summers and H.M. Thompson 22 (1998) 727

Electrostatic precipitator

Turbulent particle dispersion in an electrostatic precipitator, B.S. Choi, C.A.J. Fletcher 22 (1998) 1009

Electronic packing

Mechanics of Pb40/Sn60 near-eutectic solder alloys subjected to vibrations, C. Basaran and R. Chandaroy 22 (1998) 601

Energy method

A mathematical model and analytical solution for buckling of inclined beam-columns, J.H.B. Sampaio Jr. and J.R. Hundhausen 22 (1998) 405

Engineering applications

Modified Runge–Kutta Verner methods for the numerical solution of initial and boundary-value problems with engineering applications, T.E. Simos and G. Papakaliatakis 22 (1998) 657

Eulerian

A numeriacal model for predicting bubble formation in a 3D fluidized bed, P.J. Witt, J.H. Perry and M.P. Schwarz 22 (1998) 1071

Exhoust

Modelling and analysis of variable geometry exhaust gas systems, H. Bartlett and R. Whalley 22 (1998) 545

Fatigue crack damage

Stochastic modeling of fatigue crack propagation, A. Ray, S. Tangirala and S. Phoha 22 (1998) 197

Fast algorithm

A fast boundary element algorithm for time-dependant potential problems, M. Zerroukat 22 (1998) 183

Fast transient analysis

Analysis of reinforced concrete structures subjected to dynamic loads with a viscoplastic Drucker–Prager model, J.J.L. Cela 22 (1998) 495

Fenitrothion

Unsteady state fugacity model by a dynamic control system, R. Bru, J.M. Carrasco and L.C. Paraíba 22 (1998) 485

Finite differences

High-order-accurate discretization of a second-order equation with discontinuous coefficients, M. Arad, G. Ben-Dor, A. Yakhot 22 (1998) 69

Algebraic conditioning analysis of the incremental unknowns preconditioner, S. Garcia 22 (1998) 351

Finite element method

A third-order Taylor–Galerkin model for the simulation of two-dimensional unsteady free surface flows, M. Venutelli 22 (1998) 641

Finite-volume method

Particle transport in a bottom-feed separation vessel, Y. Li, M. Rudman and G. Brown 22 (1998) 1023

Flash smelting

Numerical modelling of combustion in a zinc flash smelter, P.T.L. Koh, T.V. Nguyen and F.R.A. Jorgensen 22 (1998) 941

Flow

Study of flow and transport in fracture network using percolation theory, H. Mo, M. Bai, D. Lin and J.-C. Roegiers 22 (1998) 277

Fluidized bed

A numerical model for predicting bubble formation in a 3D fluidized bed, P.J. Witt, J.H. Perry and M.P. Schwarz 22 (1998) 1071

Fractures

Study of flow and transport in fracture network using percolation theory, H. Mo, M. Bai, D. Lin and J.-C. Roegiers 22 (1998) 277

Free surface

Stokes flow in closed, rectangular domains, P.H. Gaskell, M.D. Savage, J.L. Summers and H.M. Thompson 22 (1998) 727

Time-varying MHD flows with free surfaces, J.R. Mooney and A.N. Stokes 22 (1998) 949

Free surface flow

Simulation of free surface recirculating flows in semi-enclosed water bodies by a k–ω model, C.W. Li and Y.F. Zhang 22 (1998) 153

Computational simulation of fluid and dilute particulate flows on spiral con- centrators, B.W. Fletcher and A.C. Partridge 22 (1998) 965

Fugacity model

Unsteady state fugacity model by a dynamic control system, R. Bru, J.M. Carrasco and L.C. Paraíba 22 (1998) 485

Gas combustion

CFD modelling of waste heat recovery boiler, M. Manickam, M.P. Schwarz and J. Perry 22 (1998) 823

Numerical modelling of combustion in a zinc flash smelter, P.T.L. Koh, T.V. Nguyen and F.R.A. Jorgensen 22 (1998) 941

Gas injection

Modelling gas injection of a Peirce–Smith-converter, J. Vaarno, J. Pitkälä, T. Ahokainen and A. Jokilaakso 22 (1998) 907

Gas–particle flow

Comparison of two-way coupling models for confined turbulent gas–particle jets in flash smelting, M.R. Davidson 22 (1998) 39

Gas–particle reaction

Numerical modelling of combustion in a zinc flash smelter, P.T.L. Koh, T.V. Nguyen and F.R.A. Jorgensen 22 (1998) 941

Gas–solids flow

A comparison of one-dimensional and three-dimensional models for the simulation of gas–solids transport systems, D.J. Mason and A. Levy 22 (1998) 517

Gas-inducing impeller

CFD simulation of gas dispersion dynamics in liquid cross-flows, G.D. Rigby and G.M. Evans 22 (1998) 799

Geostrophic balance

A coastal ocean model intercomparison study for a three-dimensional idealised test case,

B. Tartinville, E. Deleersnijder, P. Lazure, R. Proctor, K.G. Ruddick and R.E. Uittenbogaard 22 (1998) 165

Granular flow

How well do discrete element granular flow models capture the essentials of mixing processes?, P.W. Cleary, G. Metcalfe and K. Liffman 22 (1998) 995

Green element method

Green's function-based integral approaches to linear transient boundary-value problems and their stability characteristics (I), A.E. Taigbenu and O.O. Onyejekwe 22 (1998) 687

Green's functions

Green's function-based integral approaches to linear transient boundary-value problems and their stability characteristics (I), A.E. Taigbenu and O.O. Onyejekwe 22 (1998) 687

Gyroscopes

Conservative motion of discrete, tetrahedral tops and gyroscopes, D. Greenspan 22 (1998) 57

Heat transfer

A fast boundary element algorithm for time-dependant potential problems, M. Zerroukat 22 (1998) 183

Hermite integration

Enhanced lumped-differential formulations of diffusion problems, E.J. Corrêa and R.M. Cotta 22 (1998) 137

High-order scheme

High-order-accurate discretization of a second-order equation with discontinuous coefficients, M. Arad, G. Ben-Dor and A. Yakhot 22 (1998) 69

High-performance supercomputing

CFD simulation of deflagration–detonation processes using vector-and parallel computing systems, W. Rehm, M. Gerndt, W. Jahn, F. Semler and I. Jones 22 (1998) 811

Horizontal belt thin-strip casting

Mathematical and physical modelling of steelflow and solidification in twin-roll/horizontalbelt thin-strip casting machines, R.I.L. Guthrie and R.P. Tavares 22 (1998) 851

Hypergeometric functions

A mathematical model and analytical solution for buckling of inclined beam-columns, J.H.B. Sampaio Jr. and J.R. Hundhausen 22 (1998) 405

Impedance

An indirect boundary element formulation for multi-valued impedance simulation in structural acoustics, S.T. Raveendra, N. Vlahopoulos and A. Glaves 22 (1998) 379

Interaction

Turbulent particle dispersion in an electrostatic precipitator, B.S. Choi and C.A.J. Fletche 22 (1998) 1009

Inclined beam-column

A mathematical model and analytical solution for buckling of inclined beam-columns, J.H.B. Sampaio Jr. and J.R. Hundhausen 22 (1998) 405

Incremental unknowns/hierarchical basis

Algebraic conditioning analysis of the incremental unknowns preconditioner, S. Garcia 22 (1998) 351

Indirect method

An indirect boundary element formulation for multi-valued impedance simulation in structural acoustics, S.T. Raveendra, N. Vlahopoulos and A. Glaves 22 (1998) 379

Instruction set architecture

Transient and steady-state performance modeling of parallel processors, M.H. Mickle 22 (1998) 533

Inverse differential transform

Analysis of general elastically end restrained non-uniform beams using differential transform, S.H. Ho and C.K. Chen 22 (1998) 219

Isopycnal diffusion

What is wrong with isopycnal diffusion in world ocean models? P.-P. Mathieu and E. Deleersnijder 22 (1998) 367

Isothermal

Modelling gas injection of a Peirce–Smith-converter, J. Vaarno, J. Pitkälä, T. Ahokainen and A. Jokilaakso 22 (1998) 907

Lagrangian particulate analysis

Computational simulation of fluid and dilute particulate flows on spiral con- centrators, B.W. Matthews, C.A.J. Fletcher and A.C. Partridge 22 (1998) 965

Laplace operator

Algebraic conditioning analysis of the incremental unknowns preconditioner, S. Garcia 22 (1998) 351

Laminar flamelet method

Laminar flamelet modelling of turbulent premixed combustion, A.C. Benim and K.J. Syed 22 (1998) 113

Layered shell elements

Analysis of reinforced concrete structures subjected to dynamic loads with a viscoplastic Drucker–Prager model, J.J.L. Cela 22 (1998) 495

Layered theory

Semi-analytical finite element analysis of a strip footing on an elastic reinforced soil, K. Chandrashekhara, S.J. Antony and D. Mondal 22 (1998) 331

Layer-integrated numerical model

Simulation of free surface recirculating flows in semi-enclosed water bodies by a k–ω model, C.W. Li and Y.F. Zhang 22 (1998) 153

Linear algebra

Algebraic conditioning analysis of the incremental unknowns preconditioner, S. Garcia 22 (1998) 351

Linear diffusion

Green's function-based integral approaches to linear transient boundary-value problems and their stability characteristics (I), A.E. Taigbenu and O.O. Onyejekwe 22 (1998) 687

Liquid metal

Time-varying MHD flows with free surfaces, J.R. Mooney and A.N. Stokes 22 (1998) 949

Lumped mass

Conservative motion of discrete, tetrahedral tops and gyroscopes, D. Greenspan 22 (1998) 57

Lumped system analysis

Enhanced lumped-differential formulations of diffusion problems, E.J. Corrêa and R.M. Cotta 22 (1998) 137

Magnetohydrodynamic analysis

MHD analysis in hydromagnetic casting process of clad steel slabs, H. Harada, E. Takeuchi, M. Zeze and H. Tanaka 22 (1998) 873

Mathematical formulation

Enhanced lumped-differential formulations of diffusion problems, E.J. Corrêa and R.M. Cotta 22 (1998) 137

Mathematical modelling

Mathematical and physical modelling of steel flow and solidification in twin-roll/horizontal belt thin-strip casting machines, R.I.L. Guthrie and R.P. Tavares 22 (1998) 851

Mathematical and physical modeling of systems for metal delivery in the continuous casting of steel and DC casting of aluminum, D. Xu, W.K. Jones Jr., J.W. Evans and D.P. Cook 22 (1998) 883

Mechanics of fluids

A third-order Taylor–Galerkin model for the simulation of two-dimensional unsteady free surface flows, M. Venutelli 22 (1998) 641

Mesoscale eddies

What is wrong with isopycnal diffusion in world ocean models?, P.-P. Mathieu and E. Deleersnijder 22 (1998) 367

Mesoscale model

Numerical simulation of pollutant dispersion and photochemical kinetics over complex terrain, A. Giambanis, J. Anagnostopoulos, G. Bergeles 22 (1998) 313

Memory contention

Transient and steady-state performance modeling of parallel processors, M.H. Mickle 22 (1998) 533

Mesh mapping

Time-varying MHD flows with free surfaces, J.R. Mooney and A.N. Stokes 22 (1998) 949

Metal delivery

Mathematical and physical modeling of systems for metal delivery in the continuous casting of steel and DC casting of aluminum, D. Xu, W.K. Jones Jr., J.W. Evans and D.P. Cook 22 (1998) 883

Mixing control

MHD analysis in hydromagnetic casting process of clad steel slabs, H. Harada, E. Takeuchi, M. Zeze and H. Tanaka 22 (1998) 873

Mixing

How well do discrete element granular flow models capture the essentials of mixing processes?, P.W. Cleary, G. Metcalfe and K. Liffman 22 (1998) 995

Chaotic mixing simulations, B.T. Tan, P. Morris, M.C. Thompson and K. Hourigan 22 (1998) 1047

MHD

Time-varying MHD flows with free surfaces, J.R. Mooney and A.N. Stokes 22 (1998) 949

Model intercomparison

A coastal ocean model intercomparison study for a three-dimensional idealised test case, B. Tartinville, E. Deleersnijder, P. Lazure, R. Proctor, K.G. Ruddick and R.E. Uittenbogaard 22 (1998) 165

Modelling

Modelling and analysis of variable geometry exhaust gas systems, H. Bartlett and R. Whalley 22 (1998) 545

Mode shape

Analysis of general elastically end restrained non-uniform beams using differential transform, S.H. Ho, C.K. Chen 22 (1998) 219

Monotonic scheme

What is wrong with isopycnal diffusion in world ocean models?, P.-P. Mathieu and E. Deleersnijder 22 (1998) 367

Multi-phase

Mathematical modelling tools for the optimisation of direct smelting processes, M. Davis, K. Pericleous, M. Cross and P. Schwarz 22 (1998) 921

A numerical model for predicting bubble formation in a 3D fluidized bed, P.J. Witt, J.H. Perry and M.P. Schwarz 22 (1998) 1071

Multi-phase environmental model

Unsteady state fugacity model by a dynamic control system, R. Bru, J.M. Carrasco and L.C. Paraíba 22 (1998) 485

Multi-phase flow

Particle transport in a bottom-feed separation vessel, Y. Li, M. Rudman and G. Brown 22 (1998) 1023

Natural convection

Modelling confined multi-material heat and mass flows using SPH, P.W. Cleary 22 (1998) 981

Natural frequency

Analysis of general elastically end restrained non-uniform beams using differential transform, S.H. Ho, C.K. Chen 22 (1998) 219

Navier–Stokes equations

A third-order Taylor–Galerkin model for the simulation of two-dimensional unsteady free surface flows, M. Venutelli 22 (1998) 641

Non-Fourier effect

The non-Fourier effect on the fin performance under periodic thermal conditions, J.-Y. Lin 22 (1998) 629

Nonnegative control systems

Unsteady state fugacity model by a dynamic control system, R. Bru, J.M Carrasco and L.C. Paraiba 22 (1998) 485

Numerical computation methods

Computation algorithms for disturbance rejection in multivariable systems, S.A.K. Al-Assadi 22 (1998) 459

Numerical model

Comparison of two-way coupling models for confined turbulent gas–particle jets in flash smelting, M.R. Davidson 22 (1998) 39

Computed oscillations of a confined submerged liquid jet, B.M. Gebert, M.R. Davidson and M.J. Rudman 22 (1998) 843

Numerical simulation

Numerical simulation of pollutant dispersion and photochemical kinetics over complex terrain, A. Giambanis, J. Anagnostopoulos and G. Bergeles 22 (1998) 313

On the modelling of bubble plumes in a liquid pool, B.L. Smith 22 (1998) 773

Mathematical modelling tools for the optimisation of direct smelting processes, M. Davis, K. Pericleous, M. Cross and P. Schwarz 22 (1998) 921

Numerical stability

Green's function-based integral approaches to linear transient boundary-value problems and their stability characteristics (I), A.E. Taigbenu and O.O. Onyejekwe 22 (1998) 687

Optimization

Application of Taylor transformation to optimize rectangular fins with variable thermal parameters, L.-T. Yu and C.-K. Chen 22 (1998) 11

Oscillation

Computed oscillations of a confined submerged liquid jet, B.M. Gebert, M.R. Davidson and M.J. Rudman 22 (1998) 843

Over-/under-shootings

What is wrong with isopycnal diffusion in world ocean models?, P.-P. Mathieu and E. Deleersnijder 22 (1998) 367

Parallel processing

Transient and steady-state performance modeling of parallel processors, M.H. Mickle 22 (1998) 533

Particle boundaries

Modelling confined multi-material heat and mass flows using SPH, P.W. Cleary 22 (1998) 981

Particle dispersion

Turbulent particle dispersion in an electrostatic precipitator, B.S. Choi, C.A.J. Fletcher 22 (1998) 1009

Particle separation

Particle transport in a bottom-feed separation vessel, Y. Li, M. Rudman and G. Brown 22 (1998) 1023

Particle size distribution

Modeling dust-borne odor dynamics in swine housing based on age and size distributions of airborne dust, C.-M. Liao, S. Singh 22 (1998) 671

Particle space charge

Turbulent particle dispersion in an electrostatic precipitator, B.S. Choi and C.A.J. Fletcher 22 (1998) 1009

Particle tracking

CFD modelling of waste heat recovery boiler, M. Manickam, M.P. Schwarz and J. Perry 22 (1998) 823

Peirce–Smith-converter

Modelling gas injection of a Peirce–Smith-converter, J. Vaarno, J. Pitkälä, T. Ahokainen and A. Jokilaakso 22 (1998) 907

Percolation

Study of flow and transport in fracture network using percolation theory, H. Mo, M. Bai, D. Lin and J.-C. Roegiers 22 (1998) 277

Perfect disturbance rejection

Computation algorithms for disturbance rejection in multivariable systems, S.A.K. Al-Assadi 22 (1998) 459

Performance modeling

Transient and steady-state performance modeling of parallel processors, M.H. Mickle 22 (1998) 533

Periodic heat transfer

The non-Fourier effect on the fin performance under periodic thermal conditions, J.-Y. Lin 22 (1998) 629

Perturbation methods

Annular liquid jets and other axisymmetric free-surface flows at high Reynolds numbers, J.I. Ramos 22 (1998) 423

Phase-lag

Modified Runge–Kutta Verner methods for the numerical solution of initial and boundary-value problems with engineering applications, T.E. Simos and G. Papakaliatakis 22 (1998) 657

Photochemical kinetics

Numerical simulation of pollutant dispersion and photochemical kinetics over complex terrain, A. Giambanis, J. Anagnostopoulos and G. Bergeles 22 (1998) 313

Physical modelling

Mathematical and physical modelling of steel flow and solidification in twin-roll/horizontal belt thin-strip casting machines, R.I.L. Guthrie and R.P. Tavares 22 (1998) 851

Mathematical and physical modeling of systems for metal delivery in the continuous casting of steel and DC casting of aluminum, D. Xu, W.K. Jones Jr., J.W. Evans and D.P. Cook 22 (1998) 883

PIV

Mathematical and physical modelling of systems for metal delivery in the coninuous casting of steel and DC casting of aluminum, D. Xu, W.K. Jones Jr., J.W. Evans and D.P. Cook 22 (1998) 883

Plume spreading

On the modelling of bubble plumes in a liquid pool, B.L. Smith 22 (1998) 773

Pneumatic conveying

A comparison of one-dimensional and three-dimensional models for the simulation of gas–solids transport systems, D.J. Mason and A. Levy 22 (1998) 517

Poisson equation

Algebraic conditioning analysis of the incremental unknowns preconditioner, S. Garcia 22 (1998) 351

Pole zero assignment algorithms in multivariable systems

Computation algorithms for disturbance rejection in multivariable systems, S.A.K. Al-Assadi 22 (1998) 459

Pollutant dispersion

Numerical simulation of pollutant dispersion and photochemical kinetics over complex terrain, A. Giambanis, J. Anagnostopoulos, G. Bergeles 22 (1998) 313

Pool mixing

On the modelling of bubble plumes in a liquid pool, B.L. Smith 22 (1998) 773

Post combustion

Mathematical modelling tools for the optimisation of direct smelting processes, M. Davis, K. Pericleous, M. Cross and P. Schwarz 22 (1998) 921

Pressure coefficient

CFD simulation of gas dispersion dynamics in liquid cross-flows, G.D. Rigby and G.M. Evans 22 (1998) 799

Pulse

Computation of turbulent reactive flows in industrial burners, J. Ha and Z. Zhu 22 (1998) 1059

Radial basis functions

A fast boundary element algorithm for time-dependant potential problems, M. Zerroukat 22 (1998) 183

Recirculating flow

Simulation of free surface recirculating flows in semi-enclosed water bodies by a k–ω model, C.W. Li and Y.F. Zhang 22 (1998) 153

Reinforced concrete

Analysis of reinforced concrete structures subjected to dynamic loads with a visco-plastic Drucker–Prager model, J.J.L. Cela 22 (1998) 495

Reinforced soil

Semi-analytical finite element analysis of a strip footing on an elastic reinforced soil, K. Chandrashekhara, S.J. Antony and D. Mondal 22 (1998) 331

Rectangular cavities

Stokes flow in closed, rectangular domains, P.H. Gaskell, M.D. Savage, J.L. Summers and H.M. Thompson 22 (1998) 727

RNG k–ϵ turbulence model

Computational simulation of fluid and dilute particulate flows on spiral concentrators, B.W. Mathews, C.A.J. Fletcher and A.C. Partridge 22 (1998) 965

Round jets

Annular liquid jets and other axisymmetric free-surface flows at high Reynolds numbers, J.I. Ramos 22 (1998) 423

Runge–Kutta methods

Modified Runge–Kutta Verner methods for the numerical solution of initial and boundary-value problems with engineering applications, T.E. Simos and G. Papakaliatakis 22 (1998) 657

Second-order equation

High-order-accurate discretization of a second-order equation with discontinuous coefficients, M. Arad, G. Ben-Dor and A. Yakhot 22 (1998) 69

Segregation

How well do discrete element granular flow models capture the essentials of mixing processes?, P.W. Cleary, G. Metcalfe and K. Liffman 22 (1998) 995

Semi-inverse method

A variational theory for one-dimensional unsteady compressible flow – an image plane approach, J.-H. He 22 (1998) 395

Simulation

Modelling and analysis of variable geometry exhaust gas systems, H. Bartlett and R. Whalley 22 (1998) 545

Smoothed particle hydrodynamics

Modelling confined multi-material heat and mass flows using SPH, P.W. Cleary 22 (1998) 981

Solder joint

Mechanics of Pb40/Sn60 near-eutectic solder alloys subjected to vibrations, C. Basaran and R. Chandaroy 22 (1998) 601

Spiral concentrator

Computational simulation of fluid and dilute particulate flows on spiral concentrators, B.W. Matthews, C.A.J. Fletcher and A.C. Partridge 22 (1998) 965

Stochastic modeling

Stochastic modeling of fatigue crack propagation, A. Ray, S. Tangirala and S. Phoha 22 (1998) 197

Stokes flow

Stokes flow in closed, rectangular domains, P.H. Gaskell, M.D. Savage, J.L. Summers and H.M. Thompson 22 (1998) 727

Submerged jet

Computed oscillations of a confined submerged liquid jet, B.M. Gebert, M.R. Davidson and M.J. Rudman 22 (1998) 843

Sulphur combustion

Numerical modelling of combustion in a zinc flash smelter, P.T.L. Koh, T.V. Nguyen and F.R.A. Jorgensen 22 (1998) 941

Swirling

Computation of turbulent reactive flows in industrial burners, J. Ha and Z. Zhu 22 (1998) 1059

Taylor transformation

Application of Taylor transformation to optimize rectangular fins with variable thermal parameters, L.-T. Yu and C.-K. Chen 22 (1998) 11

Topology

Study of flow and transport in fracture network using percolation theory, H. Mo, M. Bai, D. Lin and J.-C. Roegiers 22 (1998) 277

Tops

Conservative motion of discrete, tetrahedral tops and gyroscopes, D. Greenspan 22 (1998) 57

Transition

Chaotic mixing simulations, B.T. Tan, P. Morris, M.C. Thompson and K. Hourigan 22 (1998) 1047

Transient

Boundary element method analysis for the transient conduction – convection in 2-D with spatially variable convective velocity, S.J. DeSilva, C.L. Chan, A. Chandra and J. Lim 22 (1998) 81

Transport

Study of flow and transport in fracture network using percolation theory, H. Mo, M. Bai, D. Lin and J.-C. Roegiers 22 (1998) 277

Trial-functional

A variational theory for one-dimensional unsteady compressible flow – an image plane approach, J.-H. He 22 (1998) 395

Turbulence

Computation of turbulent reactive flows in industrial burners, J. Ha and Z. Zhu 22 (1998) 1059

Turbulence and combustion modelling

CFD simulation of deflagration–detonation processes using vector- and parallel computing systems, W. Rehm, M. Gerndt, W. Jahn, F. Semler and I. Jones 22 (1998) 811

Turbulence model

Simulation of free surface recirculating flows in semi-enclosed water bodies by a k–ω model, C.W. Li and Y.F. Zhang 22 (1998) 153

Turbulent dispersion

Comparison of two-way coupling models for confined turbulent gas–particle jets in flash smelting, M.R. Davidson 22 (1998) 39

Turbulent flow

Turbulent particle dispersion in an electrostatic precipitator, B.S. Choi and C.A.J. Fletcher 22 (1998) 1009

Turbulent premixed flames

Laminar flamelet modelling of turbulent premixed combustion, A.C. Benim and K.J. Syed 22 (1998) 113

Twin-roll casting

Mathematical and physical modelling of steel flow and solidification in twin-roll/horizontal belt thin-strip casting machines, R.I.L. Guthrie and R.P. Tavares 22 (1998) 851

Two-phase flow

On the modelling of bubble plumes in a liquid pool, B.L. Smith 22 (1998) 773

Two-way coupling

Comparison of two-way coupling models for confined turbulent gas–particle jets in flash smelting, M.R. Davidson 22 (1998) 39

Unsteady state model

Unsteady state fugacity model by a dynamic control system, R. Bru, J.M. Carrasco, L.C. Paraíba 22 (1998) 485

Upstream finite element method

Numerical simulation of cavitating flow using the upstream finite element method, T. Uchiyama 22 (1998) 235

Variable velocity

Boundary element method analysis for the transient conduction – convection in 2-D with spatially variable convective velocity, S.J. DeSilva, C.L. Chan, A. Chandra and J. Lim 22 (1998) 81

Variational principle

A variational theory for one-dimensional unsteady compressible flow – an image plane approach, J.-H. He 22 (1998) 395

Ventilated cavities

CFD simulation of gas dispersion dynamics in liquid cross-flows, G.D. Rigby and G.M. Evans 22 (1998) 799

Vibration

Mechanics of Pb40/Sn60 near-eutectic solder alloys subjected to vibrations, C. Basaran and R. Chandaroy 22 (1998) 601

Viscoplastic material law

Analysis of reinforced concrete structures subjected to dynamic loads with a visco-plastic Drucker–Prager model, J.J.L. Cela 22 (1998) 495

Volume-of-fluid (VOF) method

Computational simulation of fluid and dilute particulate flows on spiral concentrators, B.W. Matthews, C.A.J. Fletcher and A.C. Partridge 22 (1998) 965

Vortex shedding

Numerical simulation of cavitating flow using the upstream finite element method, T. Uchiyama 22 (1998) 235

World ocean modelling

What is wrong with isopycnal diffusion in world ocean models?, P.-P. Mathieu, E. Deleersnijder 22 (1998) 367

Zinc smelting

Numerical modelling of combustion in a zinc flash smelter, P.T.L. Koh, T.V. Nguyen and F.R.A. Jorgensen 22 (1998) 941
